Upgrading and Monitoring the Apigee Hybrid API Platform

Greg Kuelgen
Customer Success Engineer, Google Cloud

Google Cloud

Thank you for taking the course on Upgrading and Monitoring the Apigee Hybrid API Platform.

In this course you learned how to upgrade and roll back the Apigee hybrid runtime installation in your Kubernetes cluster.

We discussed how Apigee hybrid performs logging activities and how you can use the runtime component logs for troubleshooting purposes.

We also reviewed the various metrics generated by the hybrid runtime components.

We discussed Apigee Analytics and the various reporting dashboards available for you to use in Apigee hybrid.

We also discussed monitoring and troubleshooting techniques for the Apigee hybrid runtime components, and completed a lab to monitor the Cassandra runtime component.

Finally, we discussed how you can involve Apigee Support to help troubleshoot issues in your Apigee hybrid installation.

Courses

1. Architecting and Installing the Apigee Hybrid API Platform

2. Managing and Securing the Apigee Hybrid API Platform

3. Upgrading and Monitoring the Apigee Hybrid API Platform

Google Cloud

This was the last course in this series on Apigee hybrid.

We hope you enjoyed learning about Managing Google Cloud's Apigee API Platform for Hybrid Cloud.
